Image smoothness

Figure: Samples obtained increasing r from left to right. For Samples SR₁, SR₂ and SR₃ the values of r are 0.10, 0.30 and 0.52 for the first row and 0.12, 0.32 and 0.39 for the second row. Higher values of r yield smoother images and larger values of PSNR (on average).

 - Cosine similarity CS between feature vectors

A D A A B A A B A A

- Training dataset: Flickr Faces HQ (FFHQ)
- LR images: obtained by downsampling HR images by a factor of 8
- Testing dataset: CelebA-HQ
- Features extraction of HR and SR images with VGG-Face
- Metrics: SSIM, PSNR and Consistency
 - Cosine similarity CS between feature vectors
- Influence of image smoothness on PSNR and CS metrics

Figure: CS and PSNR as a function of r (sampling parameter). Higher values of r produce smoother images (with higher values of PSNR) but can decrease the value of CS

Figure: Cross-plot between CS and PSNR. The correlation coefficient between CS and PSNR is -0.6591, implying that higher values of PSNR do not always result in higher values of CS.
